WordSort Lab Requirements

Write a program that allows the user to enter a list of words (one at a time) and then displays the list of words in alphabetical order.

Create a graphical user interface that provides the following:
- An appropriate label and text box so the user can enter a word
- A button for the user to click to submit the word
- A button for the user to click to show the sorted list of words
- A button for the user to clear the list of words
- An appropriate label and textarea to display the sorted list

Add each word to an ArrayList when they click the submit button.

Choose to sort the ArrayList using either BubbleSort, InsertionSort, or SelectionSort.
